

## Documentation

---

### Installation

---

1. Create a Database in phpMyAdmin in your Web Hosting Control Panel.
2. Assign a user to the Database you created.
3. Select the Database & Upload/import the "i-techno.sql" file in [phpMyAdmin](#)
4. Upload the " i-tchno.zip " folder into your web root directory (htdocs/www etc)/public\_html
5. Extract all the files to the same root folder (public\_html)
6. Edit the "config.php" and update the database variables.
7. Access your site on a web browser

How to Access the Admin Panel

Got to the "My Account" page and log-in with the following credentials:

**Email:** itechno@zyonstudios.com

**Password:** admin

"Admin" tab located in the top navigation bar. If you click this to redirect you to the admin panel. You can change the default admin credentials via the "Admin > Accounts" page. User id number 1 is always Admin

How to set-up PayPal

1. PayPal sends a request to the IPN file on every purchase made,so requires your website to be on a production server
2. Log-In via the "My Account" page with an admin account, and click the "Admin" link.
3. Click the "Settings" tab and update the PayPal variables.
4. PayPal is currently in test mode, while being in test mode you can make dummy payments etc, you can create sandbox accounts here: <https://developer.paypal.com/developer/accounts/>

5. If you are ready to start accepting payments with PayPal you can set the "paypal testmode" variable to false.
6. Make sure you update the IPN URL on the "Settings" page and update it in your PayPal account, click [here](#) for the guide on how to set this up.

#### How to set-up Stripe

1. Stripe also requires your website to be on a production server, one that can be accessed remotely.
2. Log-In to the [Stripe](#) dashboard and create a new secret key and publishable key.
3. Log-In via the "My Account" page with an admin account, and click the "Admin" link.
4. Click the "Settings" tab and update the Stripe variables.
5. Make sure you update the IPN URL on the "Settings" page.
